
Identifying Relative Key Signatures

PRACTICE DRILL

Every key signature is associated with a major *and* a minor key. A major and minor key that share the same number of sharps or flats are called *relative keys*. Once you know your major keys, you can easily figure out its relative minor by going down three half steps. Be sure to go down only two note names, like from F down to D. If you already know your intervals, the relative minor is simply a minor third below the major key. Be sure to know your major key signatures well before attempting this one!

F, d _____
